CLEANING EQUIPMENT, SUPPLIES

Changing the way the world cleans

Who We Are

Tersano Inc. is a privately held Canadian innovations company based in Windsor, Ontario, with offices, manufacturing, and distribution centers worldwide. tersano was founded in 2001 with the mission of Changing The Way The World Cleans by advancing environmentally safe and sustainable alternatives to harmful cleaning chemicals.

What We Do

tersano develops and manufactures devices that turn tap water into Stabilized Aqueous Ozone (SAO®) on-site and on demand. As a natural oxidizer, SAO is stronger than most traditional cleaning chemicals, yet it contains only two ingredients: water and oxygen. SAO is a cleaner, sanitizer, and deodorizer approved by multiple regulatory and government agencies.

Where We Serve

tersano serves clients globally in various industries including healthcare, education, manufacturing, hospitality, transportation, governmental facilities, and more. Clients include large facility support services, QSRs, and building service contractors.

Benefits

Simplicity

SAO eliminates the need to purchase, transport, distribute, store, and restock multiple cleaning/sanitizing products. Can be used on various surfaces including floors, counters, windows, stainless steel, bathroom and kitchen utilities, and more.

Safety

SAO reduces staff's exposure to harsh chemicals and is safe for human contact. SAO does not off-gas or produce any irritating fumes or fragrances. SAO is safe for sensitive skin, protecting individuals with allergies or sensitivities.

Sustainability

As a biodegradable, no-rinse solution, SAO reduces water consumption while ensuring no harmful chemicals enter local waterways. SAO cleans using cold water, helping save energy. On-site generation reduces carbon emissions.

Cost Savings

On average, clients using the SAO system have reported a 25% return on their investment. Providing product consolidation, SAO potentiates a significant ROI by helping clients save money on the cleaning products they no longer must purchase.

lotus® PRO: a wall-mounted dispenser producing SAO at high capacity for filling various cleaning equipment.

iClean® Dashboard: an automated inventory tracking and data reporting software exclusive to the lotus PRO.

iClean® FLO3: an in-line system producing the solution on-demand for applications such as ice and laundry machines, beverage lines, and sink faucets.

iClean® mini/iClean® PRO: handheld, portable technologies producing SAO at point-of-use.
