# Accelerate speed-of-service with i3's smart video technology

**Did you know a 5-second improvement in speed of service can result in a \$10,000 increase in revenue?**

i3 International has helped restaurant owners flourish by increasing sales while reducing costs. Liabilities such as fraud, food safety/waste, and criminal activity can cost restaurants thousands of dollars.

The i3 solution is designed with Quick Service Restaurant operators in mind and optimizes CCTV technology and POS data, achieving improved operational performance, including inside and outside speed of service.

Unlike traditional CCTV solutions used mainly as a theft deterrent, i3's intelligent video solutions offer operators valuable insights into their business; these insights can help drive a better customer experience. Even with these added features, the i3 smart video solution remains affordable compared to the standard CCTV system.

## Reach your goals

Leverage AI-based solutions to encourage upselling, reward repeat customers and generate higher sales from promotional items and merchandise.

## Speed of service

Combine Ai with your video system to monitor service times for in-store, drive-thru and mobile transaction pick-ups.

## Reduce shrinkage

Integrate real-time data from your POS machine and reduce occurrences like customers-without-transactions or exceptions-without-customers.
